

QUALITY IN DETAIL –
THIS IS WHAT IT'S ALL ABOUT!

Field proven Modernization, Retrofit, Installation,
Maintenance.

For many years, EDM Technik GmbH has offered extensive knowledge and experience combined with highest flexibility and professional project management to customer.

EDM Technik GmbH can rebuild machine tools to achieve positioning and geometrical tolerances currently being held on new machines, or convert a manual machine to full CNC operation turning it into a world class performer.

Remanufacturing or modernizing a machine tool offers significant savings such as

- Reduced capital investment
- Utilization of the same machine foundation
- Increase of Availability, Productivity and Manufacturing accuracies
- Utilization of the same tooling and part fixtures
- But also to include new safety guards and safety devices to comply with the latest regulations

Our services at a glance

Machine Tool Rebuild

Many times a machine tool rebuild is an economical alternative to replacing or purchasing a new machine tool.

Modernization

Converting a manual machine tool to full CNC operation can change your machine into a first-class performer that will meet highest requirements.

Custom Design and Engineering

Whether you need to adapt your machine tool to new requirements or need to add new machining technologies, our engineers can help to find the perfect solution.

Service & Maintenance

We offer professional machine tool services performed by highly trained and qualified specialists to help reduce the down time and increase productivity of your machine tool. 24/7 – we offer our service around the clock!

Level & Alignment

Our machine Alignment/Geometry Restoration specialists will return your machine to original alignment specification using "State of the Art" measuring equipment.

Contract Machining

We offer grinding services on a Favretto way grinder for components up to a weight of 5300 kg and up to a lengths of 5700 mm.

Facts about our company

For more than 18 years EDM Technik GmbH intelligent modernization solutions combine current technology with extensive knowledge and experience of machine tools.

The location of Mechernich has a long tradition in regard to machine tool manufacturing. Since the early 50th the Dörries Company has manufactured a wide range of machine tools in today's EDM Technik GmbH's facility. In the 90th, when the Dörries machine tool production was moved from Mechernich to Mönchengladbach, some of the former employees decided to start a new company offering machine tool service. EDM Technik GmbH was born.

Shortly after EDM Technik GmbH was founded by former Dörries employees in 1998, it was clear where the journey will lead.

By ever more demanding challenges of the customers EDM Technik GmbH has developed to become one of the leading enterprises in the field of machine tool overhaul and modernization.
